

## PFI Taper Roller Bearings

PFI Taper Roller Bearings take higher radial loads and axial loads due to special heat treated steel. PFI Taper Roller Bearings are also available in two row versions for Front & Rear Wheel HUB Bearing units to support axial loads in either direction. Optimized designs can be supplied with high strength cages for arduous applications and sealed with triple lip sealing innovations to maintain long life.

## Precision Manufacturing

PFI manufacturing process creates the highest and exacting technical attributes equivalent to the original manufacturer's specification. PFI Taper Roller Bearings includes tolerance's that are tighter than standard ISO bearings. Quick, easy and consistent pinion preload setting allowing use of the nominal spacer more frequently, resulting in reduced pinion spacer Inventory and pinion assembly time equals additional cost savings.

# Forged Long Life Bearing Rings

All PFI bearings are manufactured from forged long life steel with heat treatment Bearings in Automotive Wheel applications with ability to take exceptionally hi-impact loads. This results in outstanding durability and long life. PFI specially hardened case Raceways with a forged durable core increases higher load carrying ability on Australian tough roads.

## Special Roller & Raceway Crowning Features.

PFI Bearings include extra strengthening features ensuring they withstand the excessive stresses placed on these assemblies. Another premium technical feature of PFI Bearings is to ensure long life with PFI Forged Rings with Optimized Crowning of the Rolling Elements.

We have a full range of Wheel Bearing Kits in Tapered Roller Bearings for all car/truck models in Australia.
